PROFESSIONAL SUMMARY

Data analyst with direct experience validating large structured datasets, building anomaly-detection dashboards, and maintaining the configuration tables that keep operational reporting accurate. Self-directed study of CLOB mechanics, market maker incentive design, and on-chain settlement positions me to contribute to Orderly's liquidity operations team from day one. Seeking to apply structured data operations skills inside DeFi infrastructure where precision at the data layer directly affects trading performance.

CORE SKILLS

Data Ops: Data Cleaning & Validation | ETL & Transformation | Anomaly Detection | Configuration Table Maintenance

Reporting: Dashboard Monitoring (Power BI, Tableau) | Report Automation | Alerting Mechanisms

Technical: SQL | Python (pandas) | Excel (Advanced: pivot tables, VLOOKUP)

Web3/DeFi: CLOB & AMM Models | Liquidity Provision | Market Maker Incentives | On-chain Settlement

PROFESSIONAL EXPERIENCE

Data Analyst Intern — Lagos State Agency for
Education (Remote)

2023 – Present

- Cleaned and validated 10,000+ rows of educational records in Python and Excel, resolving duplicate and inconsistent entries that would otherwise corrupt reporting outputs.
- Monitored live Power BI and Tableau dashboards tracking operational KPIs, identifying and escalating data discrepancies before they reached stakeholder reports.
- Built Python-automated ETL scripts to extract and transform raw source data into weekly and monthly report packages, cutting manual compilation time by 25%.
- Maintained parameter and configuration tables underpinning team-wide reporting workflows, versioning updates to prevent metric drift across reports.

PROJECTS

S&P 500 Market Intelligence Dashboard — Personal

2024

Project — Power BI & Excel

- Built a multi-view dashboard tracking price trends, trading volume distribution, sector comparisons, and KPI cards across S&P 500 constituents from raw CSV to production-ready output.
- Engineered anomaly-detection views flagging unusual volume spikes and intraday price deviations, producing a watchlist-style output comparable to liquidity monitoring dashboards.

WEB3 & DEFI FAMILIARITY

- Studied CLOB vs. AMM liquidity models, perpetual futures mechanics, bid-ask spread dynamics, market maker incentive structures, and on-chain settlement processes.
- Researched Orderly Network's omnichain infrastructure — specifically how concentrating liquidity into a single orderbook eliminates cross-chain fragmentation — and key operational metrics: slippage, fill rates, and spread behaviour.

EDUCATION

B.Sc. Computer Engineering — Redeemer's
University, Osun State

2026
